1. About this guide

Objectives and target audience

This guide describes how to install and configure the Skrill Payrex module. It assumes that you have an existing Payrex installation.

Conventions used in this guide

The table below lists some of the conventions used in this guide.

Table 1-1: List of conventions

Convention	Description
Code example	Used to illustrate example code, functions and commands.
<i>File path</i>	Used to indicate a file path or folder structure.
<u>Glossary</u>	Glossary term
Menu1 > Menu option2 >	Indicates a menu path.

2. Introduction

What is the Payrexx module?

Payrexx is an eCommerce platform, which provides online merchants with a flexible shopping cart system, as well as control over the look-and-feel, content and functionality of their online store.

Payrexx has been fully integrated with Skrill's online payment solution called Quick Checkout. Installing and configuring the Skrill Payment Solution module provides a simple, secure and convenient option for connecting to Skrill's online payment processing platform via Payrexx.

Skrill customers using Payrexx have access to a wide range of card and alternative payment methods.

Signing up for a Skrill account

Before you can start accepting payments through Skrill, you need to open a free merchant account by completing the online application form [here](#).

Once your application has been approved you can configure your Skrill credentials in your Skrill merchant account and then copy them in the your Payrexx backend and start taking payments.

3. Installing and configuring Payrexx

Secret Word and API Password

It is mandatory to setup a secret word and API/MQI password for your Skrill merchant account before configuring the Skrill Payrexx module. The secret word is used to authenticate the data sent back to your Payrexx server after payment. You must obtain the IP address of your Payrexx server to configure the API/MQI password. You can find this IP address by executing the following command from a command prompt:

```
ping <server domain name>
```

For example:

```
ping example.payrexxserver.com
```

Pinging example.payrexxserver.com [145.76.160.206] with 32 bytes of data:

Make a note of the set of numbers in the square brackets. This is the IP address. Now you have the IP address, you can setup the secret word and API/MQI password as follows:

1. Log in to your Skrill merchant account at www.skrill.com
 2. Go to **Settings > Developer Settings** (Figure 3-1)
 3. Set API / MQI Password using the toggle, type and confirm by clicking **Save**
 4. For each section, specify the IP address(es) or IP address range of your Payrexx server. This prevents payment or money transfer requests from other IP addresses if your secret word or API password is compromised. All requests from other IP addresses are denied. Access can be granted to:
 - A single IP address (e.g. 145.76.160.206 using the example above)
 - Multiple IP addresses, separated by space (e.g. 192.168.0.2 10.0.0.2)
 - A subnet in CIDR notation (e.g. 192.168.0.0/24)
 5. Set Secret Word using the toggle, type and confirm by clicking the **Save** button
- Note:** Your Secret Word must contain at least: 8 characters, 1 uppercase letter, 1 lowercase letter, and 1 number.

The screenshot displays the Skrill Developer Settings interface. The left sidebar contains navigation links: Home, Transfers, Banking, Balances, All Transactions, Users, Settings (selected), Account Settings, Developer Settings (highlighted), Wallet Label Settings, and Merchant Information. The main content area is titled 'Developer Settings' and includes a sub-header 'Configure API and security settings for your wallet account'. It shows the 'Bla Bla Wallet' with ID: 118404455. Below this, there are three tabs: 'Wallet IP Whitelisting', 'API / MQI / GSR / CVT Management' (active), and 'API Documentation'. The 'API / MQI / GSR / CVT Management' tab contains three sections: 'Automated Payment Interface (API)' (Disabled), 'Merchant Query Interface (MQI)' (Disabled), and 'Gateway Secure Restriction (GSR)' (Disabled). Each section has a toggle switch and a list of IP addresses. The 'Set API / MQI Password' and 'Set Secret Word' sections are both Enabled and contain password input fields and 'Save' buttons. The footer includes links for 'Terms', 'Privacy Notice', 'Regulatory Disclosures', and 'Cookie Notice', along with a copyright notice for PaySafe Holdings UK Limited.

Download Skrill on your Payrex backend

The next stage of the Payrex integration is to configure the Payrex module to connect to your Skrill account. The steps are as follows:

1. Login to your Payrex
2. Select **Settings**
3. Go to **Payment Providers**

4. Click on **Credit and Debit Cards**
5. Select **Skrill** (Figure 3-2)

Configure Skrill Settings

Configure the Skrill Settings as follows:

1. Enter your Skrill Merchant account email address
2. Enter the API password and Secret word that you set up in the previous section

Table 3-1: Skrill Settings

Field Name	Description	Format/ Example
Merchant Account (email)	The email address linked to your Skrill merchant account (created by you when you first signed up for a Skrill merchant account).	techpubs@skrill.com
API Password	The API password. This field is mandatory. It allows the Payrex server to receive payment information.	N/A
Secret word	Enter the secret word configured for your Skrill account here. This feature is mandatory and ensures the integrity of the data posted back to your Payrex servers.	N/A

4. Customer Experience

This section describes the customer's checkout experience when using the Skrill Payrex module.

Note: We only describe the Checkout process from the payment selection step onwards as the previous steps are unchanged.

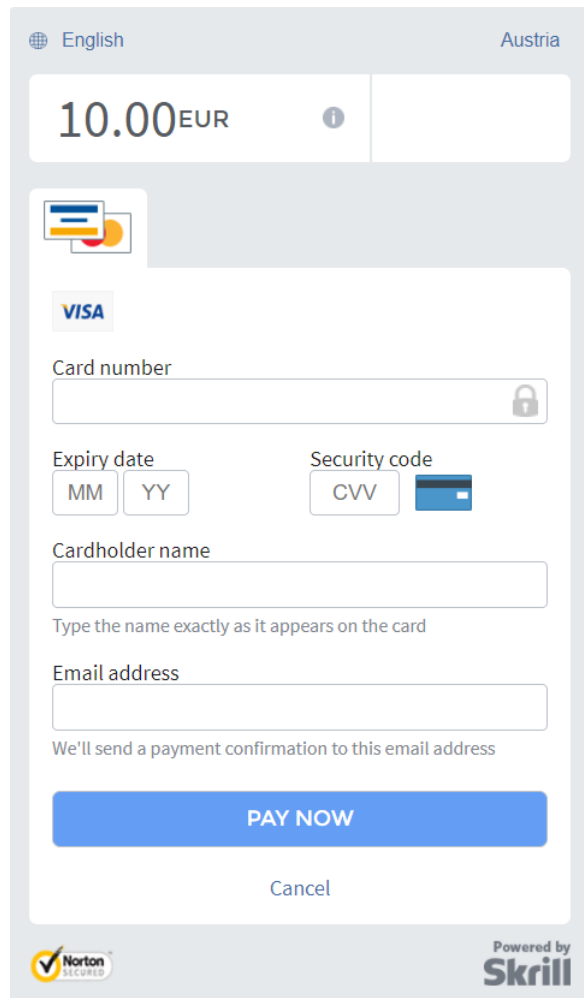

The steps are as follows:

1. Click a payment method from the list of available payment methods (this list depends on the customer's country, the payment options configured for your Skrill account and the payment options configured in the Skrill Payrex Module)

The screenshot displays the Skrill Payrex checkout interface. At the top, it identifies the 'Online payment system' as 'Paysafe Group'. Below this, a summary bar shows the item 'T-shirt' and the amount '10.00' in 'EUR'. The 'Contact details' section includes a 'Title' dropdown set to 'Mr.', 'First Name' and 'Last Name' text boxes (containing 'Customer' and 'Last name' respectively), and an 'Email' field with 'test12@gmail.com'. The 'Payment details' section features a row of payment method logos: VISA, Mastercard, American Express, RAPID, Skrill, and Klarna. Below the logos, a text prompt reads 'Click on the button below to complete the payment with Skrill.' A large, dark purple button with a shopping cart icon and the text 'Pay EUR 10.00' is positioned at the bottom.

Figure 4-1: Payrex Checkout Payment selection showing different payment methods

2. Enter Payment details in the Skrill Payment Form

The image shows a mobile payment interface for Skrill. At the top, it displays 'English' and 'Austria'. Below this, a white box contains the amount '10.00' followed by 'EUR' and an information icon. A Visa logo is shown above the input fields. The 'Card number' field is a long text box with a lock icon. The 'Expiry date' is split into 'MM' and 'YY' boxes. The 'Security code' is split into a 'CVV' box and a card icon. Below these is the 'Cardholder name' field with a note: 'Type the name exactly as it appears on the card'. The 'Email address' field is followed by the note: 'We'll send a payment confirmation to this email address'. At the bottom of the form are two buttons: a blue 'PAY NOW' button and a grey 'Cancel' button. The footer includes the Norton logo on the left and 'Powered by Skrill' on the right.

Removing or reducing the header and reducing the footer

You can request a version of the Skrill payment form without the Skrill header and amount fields. The security logo is also removed from the footer, to reduce its size. To enable this option, please contact Skrill Merchant Services and ask for the Reduced Header and Footer option. This option is shown in the screenshot below (The standard payment form is shown on the left and the reduced header and footer option on the right).

The image displays three versions of the Skrill payment form side-by-side. The leftmost form is the standard version, featuring a header with '10.00 EUR' and a footer with the Norton logo and 'Powered by Skrill' text. The middle form shows the 'Reduced Header' option, where the header amount field is removed. The rightmost form shows the 'Reduced Footer' option, where the Norton logo and 'Powered by Skrill' text are removed from the footer. All three forms share the same central payment fields: card number, expiry date (MM/YY), security code (CVV), cardholder name (First/Last), and email address, followed by a 'PAY NOW' button.

Figure 4-5: Reduced Header and Footer Option

5. Testing

We provide test cards shown in the table below for use with test merchant accounts. When using these card numbers enter an expiry date in the future and a random CVV number.

Table 5-1: Test Cards

Brand	Card Number
MasterCard	5438311234567890
Visa	4000001234567890

Should you wish to test Skrill in DEMO shops please get in touch with Skrill support at newbusiness@paysafe.com, so we can provide you with access.
